## ***Food Alone Inflation***

In April 2025, the overall food inflation at the provincial level decreased to 0.7 percent from 1.9 percent in March 2025. In April 2024, food inflation was observed at a higher rate of 8.1 percent. Among the food groups, **vegetables, tubers, plantains, cooking bananas and pulses** mainly influenced the downward trend of food inflation in April 2025 at 0.2 percent, from 8.5 percent in the previous month. This food group contributed 43.3 percent share to the overall food inflation in the province. Following the mentioned food group, **fish and other seafood** also posted a decrease in the current month at 7.8 percent inflation, from 9.9 percent in March 2025, contributing to a total of 27.3 percent of the overall share of food inflation in the province.

### ***The Purchasing Power of the Peso (PPP) increases to Php 0.81 in April 2025***

Figure 2. Purchasing Power of the Peso (PPP) in Agusan del Norte, April 2024 to April 2025

The Purchasing Power of the Peso (PPP) in Agusan del Norte increased slightly to Php 0.81 in April 2025, indicating a modest strengthening of the peso despite ongoing inflation. This means that a peso in 2018 is now worth only 81 centavos. To buy the same goods and services that cost Php 100.00 in 2018, consumers now need Php 123.80, reflecting the sustained impact of rising cost of living in the province.

## TECHNICAL NOTES

The Philippine Statistics Authority generates and announces the monthly **Consumer Price Index (CPI)** based on the nationwide survey of prices for a given basket of goods and services. Two important indicators, the inflation rate and purchasing power of the peso (PPP), are derived from the CPI which are important in monitoring price stability and the value of the country's currency.

The **Consumer Price Index (CPI)** is an indicator of the change in the average prices of goods and services commonly purchased by consumers relative to a base year. It shows how much on average prices of goods and services have increased or decreased from a particular reference period known as base year.

**Inflation Rate** refers to the rate of change in the average price level as measured by the CPI between two periods. It is interpreted in terms of declining purchasing power of money.

**The Purchasing Power of the Peso (PPP)** indicates the value of the peso in the period under review as compared to the value of the peso in the base period. It is computed as the reciprocal of the CPI for the period under review multiplied by 100.
