Food Alone Inflation

In June 2025, the overall food inflation at the provincial level decreased to -2.5 percent from -0.3 percent in May 2025. In June 2024, food inflation was observed at a higher rate of 7.8 percent. Among the food groups, **cereals and cereal products** mainly influenced the downward trend of food inflation in June 2025 at -15.2 percent, from -9.9 percent in the previous month. This food group contributed 66.7 percent share to the overall food inflation in the province.

Following the mentioned food group, **fish and other seafood** also posted a decrease in the current month at 3.9 percent inflation, from 10.3 percent in May 2025, contributing to a total of 32.0 percent of the overall share of food inflation in the province. Additionally, **ready-made food and other products not elsewhere classified** recorded a lower inflation rate at -0.1 percent in June 2025, from 1.1 percent in May 2025.

The Purchasing Power of the Peso (PPP) increases to Php 0.82 in June 2025

Figure 2. Purchasing Power of the Peso (PPP) in Agusan del Norte, June 2024 to June 2025

In Agusan del Norte, the Purchasing Power of the Peso (PPP) increased to PhP 0.82 in June 2025, from PhP 0.81 in May 2025, indicating a slight strengthening of the peso despite ongoing inflation. This means that a peso in 2018 is now worth only 82 centavos. As a result, consumers would need PhP 121.90 in 2025 to buy the same goods and services worth PhP 100.00 in 2018, reflecting the continued impact of rising living costs in the province.

TECHNICAL NOTES

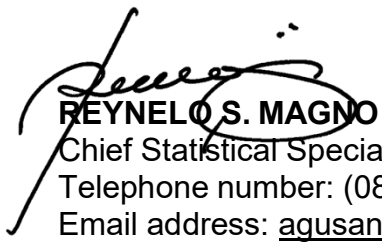

The Philippine Statistics Authority generates and announces the monthly **Consumer Price Index (CPI)** based on the nationwide survey of prices for a given basket of goods and services. Two important indicators, the inflation rate and purchasing power of the peso (PPP), are derived from the CPI which are important in monitoring price stability and the value of the country's currency.

The **Consumer Price Index (CPI)** is an indicator of the change in the average prices of goods and services commonly purchased by consumers relative to a base year. It shows how much on average prices of goods and services have increased or decreased from a particular reference period known as base year.

Inflation Rate refers to the rate of change in the average price level as measured by the CPI between two periods. It is interpreted in terms of declining purchasing power of money.

The Purchasing Power of the Peso (PPP) indicates the value of the peso in the period under review as compared to the value of the peso in the base period. It is computed as the reciprocal of the CPI for the period under review multiplied by 100.
